

## Ask Me Question: User Specifications

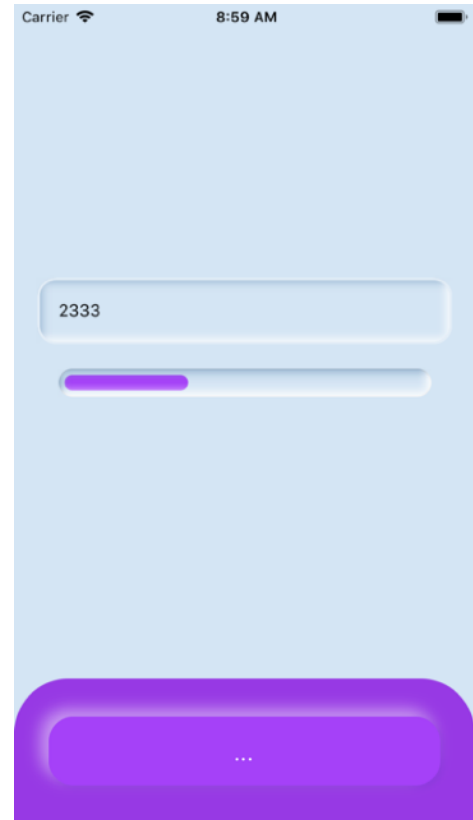

1. As soon as a user launches the app she sees the screen with an input field and 'Process' button springs up (which is disabled while input value is less than 4 characters)

2. The user focuses on the input field, the input field is highlighted and the keyboard of numeric type comes up.

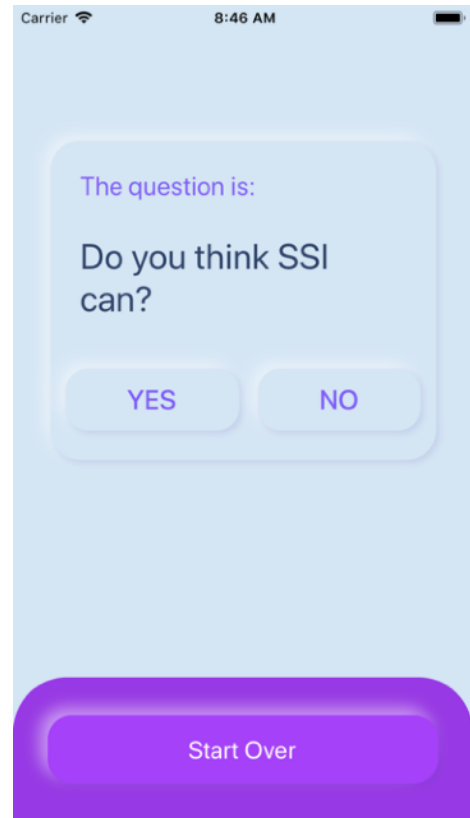

3. As soon as 4 numeric characters, which are a representation of a room ID, are provided progress bar is displayed under the input field and button title changes to '...' indicating that the request to the server is being processed.

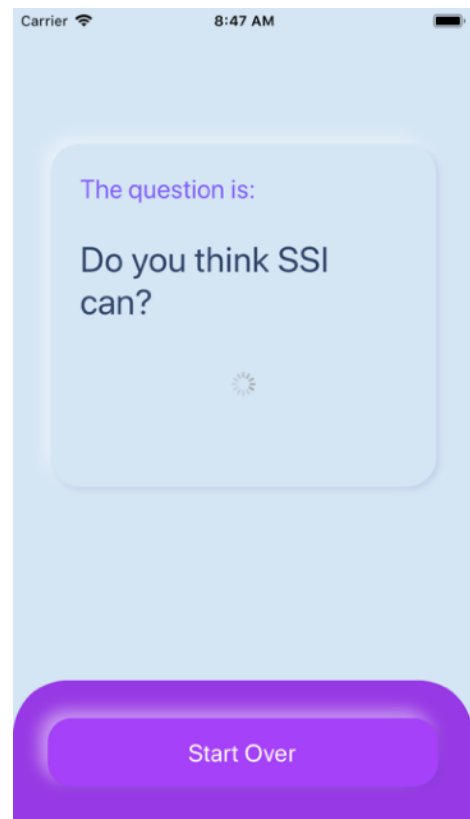

4. If the request failed error message springs up on top of the screen and displays an error message. As soon as user focuses input field error message will be dismissed.

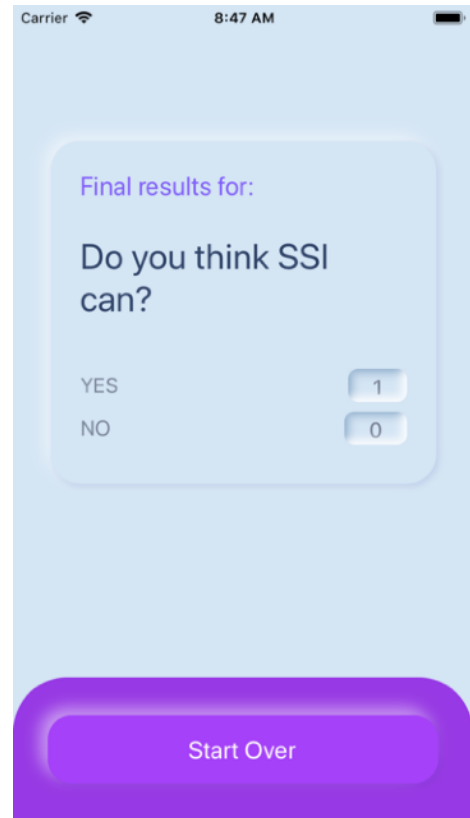

5. If the request succeeded question card with the question body received from the server is displayed and button title is changed to 'Start Over'. The transition between input and question card is animated imitating the scrolling down effect.

6. The question card consists of a question body and action buttons that act as vote options. A title of the vote option comes from the server. As soon as the vote cast by pressing the vote option the request to the server is being sent. The activity indicator is displayed during the time request is being processed.

7, When request succeeds statistics indicating how many times a vote was cast to a specific vote option are displayed.

8. If request fails result is not being displayed and error notification springs up from the top of the screen.

9. The user can decide to start all over again by processing the 'Start over' button which will bring her to the initial screen with initial settings (empty input, unfocused, disabled button). The transition between question card and input is animated imitating scrolling up effect. Button title changes to 'Process'.
